AQUASHIELD: SMART FIRE SYSTEM

OBJECTIVE

Our main objective of the project is to design a system that detects fire and smoke early, automatically responding to emergencies to minimize damage and harm. By integrating sensors and automated responses, it provides a comprehensive safety solution, prioritizing occupant safety and reducing property damage through timely alerts and swift action.

Modules Integrated

- Smoke detector: Detects smoke particles.
- Flame sensor: Detects flames.
- Relay module: Controls devices like water pumps or alarms.
- Buzzer/alarm: Provides audible alerts.
- LED indicators: Visual system status.

HARDWARE REQUIREMENTS

Ardunio Mega

Fire Sensor

MQ Sensor

DC Motor

Water Pump

Relay Module

Servo Motor

Buzzer

LED

BENEFITS

- Early fire detection
- Automated response to emergencies
- Enhanced safety for occupants
- Minimized property damage
- Quick alerts and response
- Reduced risk of injury or loss
